

MAHIMA KAMDI

DevOps Engineer | AWS Certified Solutions Architect – Associate

+91 77419 14725 | mahimakamdi25@gmail.com | linkedin.com/in/mahima-kamdi | github.com/mahimakamdi

PROFESSIONAL SUMMARY

AWS Certified Solutions Architect – Associate with 3.4+ years of experience in release engineering, CI/CD automation, cloud infrastructure, and production support. Proven track record automating deployments and operational workflows, validating releases across multi-environment pipelines, and driving Infrastructure as Code (IaC) and GitOps adoption to improve deployment speed and reliability. Skilled in troubleshooting Linux-based systems, leading root-cause analysis for production incidents, and partnering cross-functionally to keep releases on schedule. Hands-on across AWS, Terraform, Kubernetes, Docker, Jenkins, GitHub Actions, Helm, ArgoCD, Ansible, and Python, with monitoring proficiency in Prometheus, Grafana, CloudWatch, and Datadog.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, VPC, IAM, S3, RDS, EKS, Auto Scaling, ELB, CloudWatch), Terraform, Ansible, Linux (Ubuntu, CentOS), Windows, Networking (TCP/IP, DNS, HTTP/HTTPS, SSH, Security Groups)

CI/CD & Containers: Jenkins, GitHub Actions, Docker, Kubernetes, Helm, ArgoCD, FluxCD, Maven, Gradle

DevSecOps & Monitoring: SonarQube, Trivy, Prometheus, Grafana, CloudWatch, Datadog, Log Analysis & Alerting

Programming & Data: Python, Shell Scripting, Groovy, Java, MySQL, MongoDB, SQL, REST APIs, Postman, Swagger

Practices & Collaboration: CI/CD, IaC, GitOps, DevSecOps, Agile/Scrum, JIRA, Git/GitHub/Bitbucket/Gerrit, Release & Incident Management

WORK EXPERIENCE

DevOps Engineer (Test and Release Engineer)

March 2025 – Present

Trace — Hyderabad

- Own end-to-end CI/CD deployment for a high-performance, API-driven Background Verification Platform, delivering 10+ releases per month at a 95% deployment success rate.
- Drive release validation, deployment verification, and environment readiness checks, cutting production deployment issues by 25%.
- Automate operational workflows using Python, reducing manual effort in release and monitoring tasks by 40%.
- Monitor application health and lead production troubleshooting and log analysis, cutting mean time to detect (MTTD) by 30%.
- Lead Root Cause Analysis (RCA) for production incidents, reducing mean time to resolution (MTTR) by 30% across 20+ incidents.
- Coordinate releases and collaborate cross-functionally with development, QA, and business teams, sustaining a 95% on-schedule deployment rate.

Associate Software Engineer

January 2024 – March 2025

General Motors (GM) — Hyderabad

- Developed automation scripts and supported a Jenkins Master-Agent pipeline architecture, reducing build and deployment time by 30%.
- Configured Git webhook automation to trigger builds directly from code commits, cutting manual build triggers by 80%.
- Performed deployment validation, release automation, and CI/CD pipeline support across 5+ environments.
- Troubleshot Linux and QNX-based systems, resolving 30+ environment and deployment issues to maintain release stability.
- Monitored logs and managed environment configurations, maintaining 95% release stability across production environments.

Junior Software Engineer

April 2023 – December 2023

General Motors (GM) — Hyderabad

- Automated validation testing for Android Auto and Apple CarPlay integrations, improving test coverage by 30%.
- Executed and maintained Jenkins pipelines for CI/CD verification integrated with Git, reducing manual verification effort by 40%.

PROJECTS

Logistics Application — End-to-End DevOps Automation

- Designed and deployed a production-grade logistics application on AWS EKS, implementing a scalable, highly available Kubernetes infrastructure supporting 99% uptime.
- Automated cloud infrastructure provisioning with Terraform/OpenTofu and configuration management with Ansible, cutting manual provisioning time by 60%.
- Built secure CI/CD pipelines using Jenkins integrated with SonarQube and Trivy, reducing deployment time by 40% while catching 20+ vulnerabilities pre-release.
- Implemented GitOps deployment with ArgoCD and Helm, enabling automated, version-controlled rollbacks within 5 minutes.
- Configured Prometheus, Grafana, and Datadog for real-time monitoring and alerting, cutting incident detection time by 40%.
- Implemented Velero for Kubernetes backup and disaster recovery, achieving a recovery time objective (RTO) of 15 minutes.

Tech Stack: AWS (EKS, EC2, IAM, VPC, S3), Terraform, OpenTofu, Ansible, Docker, Kubernetes, Helm, Jenkins, ArgoCD, SonarQube, Trivy, Prometheus, Grafana, Datadog, Velero, Git, Linux

AWS Cost Optimization Automation

- Built a serverless cost-governance system using Python, Boto3, and AWS Lambda to identify and clean up orphaned EBS volumes, saving approximately \$20–50/month in AWS spend.
- Scheduled daily automated scans using AWS EventBridge across 1+ AWS accounts, eliminating 4+ hours/month of manual cost-audit effort.
- Implemented pre-deletion validation logic and error handling to ensure zero risk of accidental resource deletion.
- Enabled full auditability with structured JSON CloudWatch logging for every automated action taken.
- Applied IAM least-privilege execution roles to enforce secure, scoped access for the automation.
- Extended the automation pattern to detect additional unused resources, including orphaned snapshots, unattached Elastic IPs, and unused ENIs.

Tech Stack: Python, Boto3, AWS Lambda, EventBridge, EBS, CloudWatch, IAM, S3, AWS Cost Explorer, AWS Budgets, SNS, CloudTrail, Git

AI Data Assistant — RAG + SQL + FastAPI

- Built an AI-powered data assistant enabling natural-language querying of relational databases using a Retrieval-Augmented Generation (RAG) architecture.
- Designed a schema-aware retrieval pipeline using LangChain, ChromaDB/FAISS vector stores, and OpenAI embeddings.
- Implemented natural language-to-SQL query generation using GPT-4 and Llama 3 (via Ollama), achieving 90% query accuracy.
- Built a secure database execution layer with SQLAlchemy and Pydantic validation to prevent malformed or unsafe queries.
- Exposed the assistant as a REST API using FastAPI, containerized with Docker, and deployed on AWS.
- Conducted end-to-end testing and performance tuning, reducing average query response time to 3 seconds.

Tech Stack: Python, LangChain, OpenAI GPT, Ollama (Llama 3), PostgreSQL, MySQL, SQLAlchemy, Pydantic, FastAPI, ChromaDB, FAISS, Docker, AWS

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- Quality & Precision Recognition Certificate

EDUCATION

Bachelor of Engineering, Aeronautical Engineering

CGPA: 9.3

Priyadarshini College of Engineering — Nagpur, Maharashtra
